

CNBEEBAY
PHARMACEUTICAL SOURCING

Company profile / 2026

Pharmaceutical intermediates and raw materials from China.

CAS-led product access, supplier coordination and international commercial execution
for pharmaceutical manufacturers, laboratories and specialist distributors.

www.cnbeebay.com

01 / Position

A commercial interface for technical products.

CNBeebay connects overseas pharmaceutical demand with China's broad intermediate and raw-material supply base. The work starts from the molecule and the intended scale, then organizes the relevant supplier resources around that requirement.

Overseas experience

Pharmaceutical raw-material and intermediate business developed around international buyer requirements.

China integration

A broad supplier base coordinated through one accountable commercial interface.

Practical execution

Product fit is established before payment, export and destination details are finalized.

CNBEEBAY
PHARMACEUTICAL SOURCING

02 / Product architecture

617,992 supplyable synthesis-on-demand records.

The catalog is a discovery layer, not a stock claim. Each request is confirmed against specification, quantity, lead time and supplier fit.

-
- 01 **Fluorinated intermediates**
 - 02 **Heterocyclic intermediates**
 - 03 **Halogenated and coupling precursors**
 - 04 **Chiral compounds**
 - 05 **Specialty and custom requests**
 - 06 **Multi-item CAS-list sourcing**

03 / Supply scope

One product system for research, pilot and commercial demand.

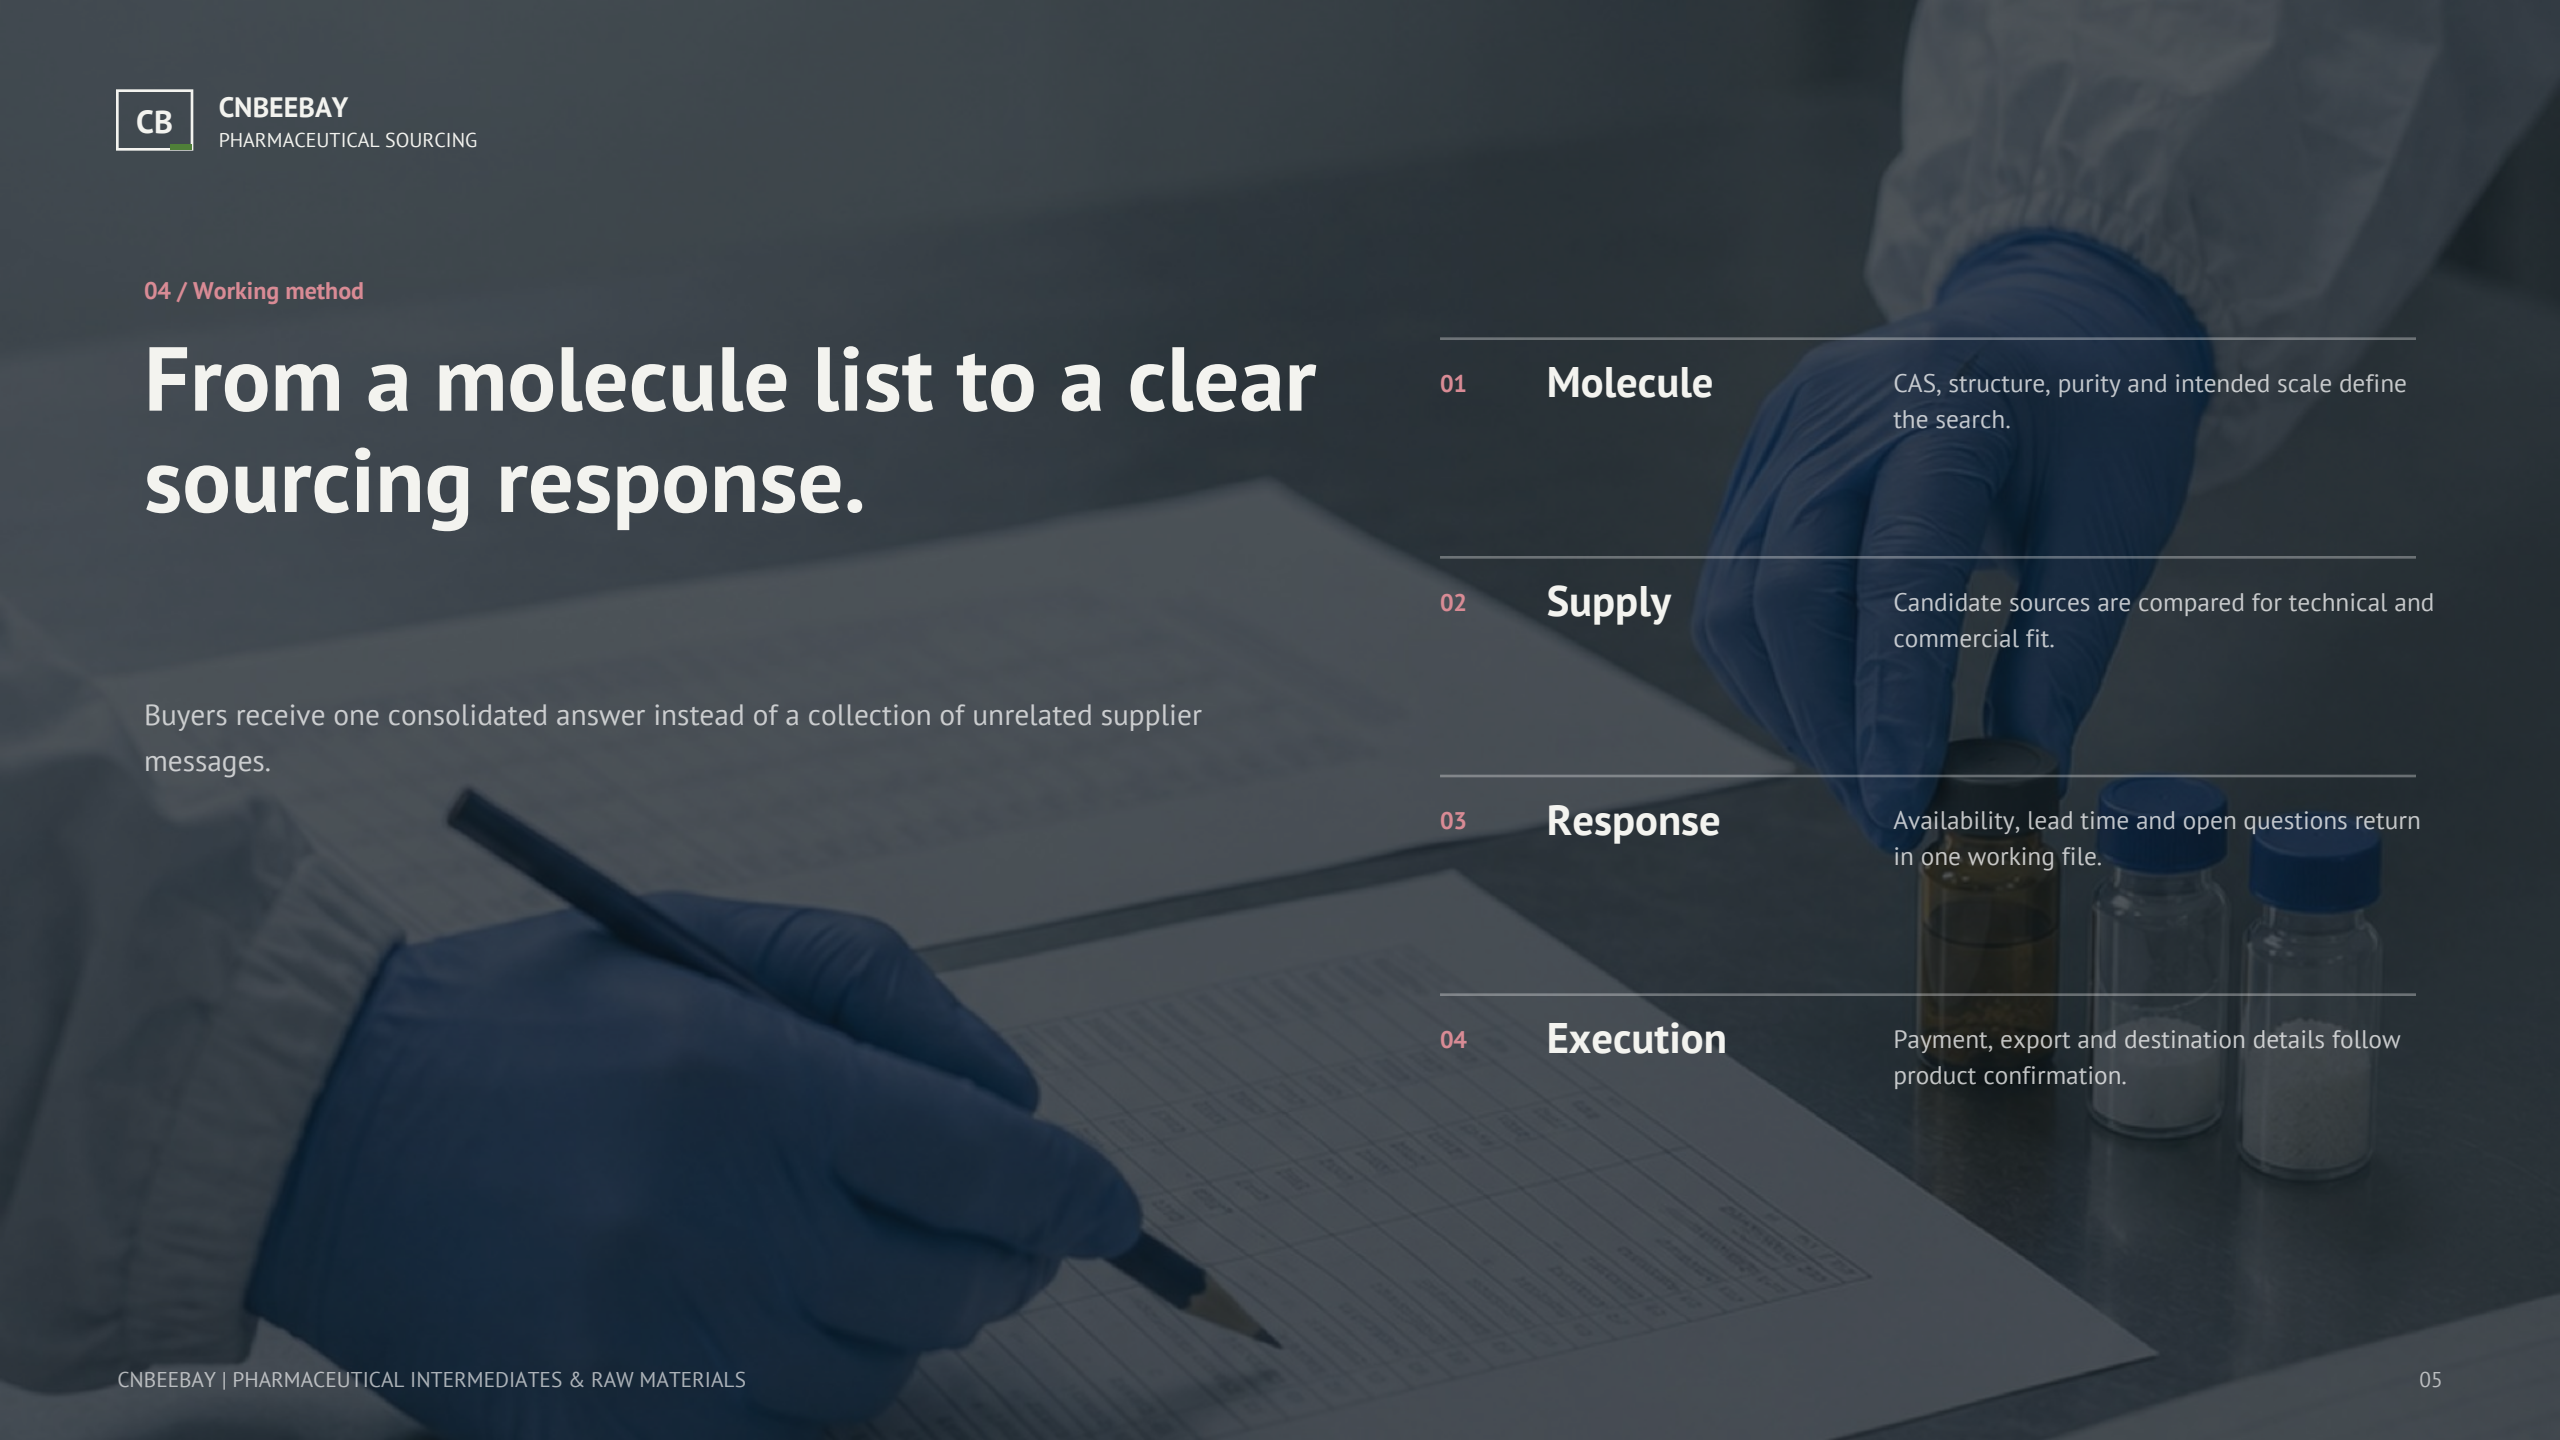

- | | | |
|----|-------------------------------------|---|
| 01 | Advanced intermediates | Building blocks, KSM candidates and advanced intermediates for medicinal chemistry and route development. |
| 02 | Pharmaceutical raw materials | API-related and formulation inputs supported through established overseas commercial experience. |
| 03 | Veterinary APIs | A focused range for veterinary pharmaceutical manufacturers and specialist distributors. |
| 04 | CAS-list sourcing | Multi-item requests matched across a broad China synthesis and supply network. |

04 / Working method

From a molecule list to a clear sourcing response.

Buyers receive one consolidated answer instead of a collection of unrelated supplier messages.

- 
- 01 Molecule** CAS, structure, purity and intended scale define the search.
 - 02 Supply** Candidate sources are compared for technical and commercial fit.
 - 03 Response** Availability, lead time and open questions return in one working file.
 - 04 Execution** Payment, export and destination details follow product confirmation.

05 / China supply integration

Broad access is valuable only when it produces a usable decision.

CNBeebay's role is not to present every supplier equally. It is to identify relevant sources, clarify constraints and return a coherent commercial response around the buyer's requirement.

01

Discover

Search the catalog and supplier network by molecule, structure and application context.

02

Qualify

Compare scale, specification, lead time and supplier readiness against the actual project.

03

Coordinate

Keep technical questions, quotation assumptions and execution details within one working interface.

06 / Commercial execution

International execution, with Russia capability where relevant.

Commercial coordination begins after product fit is established. This keeps the brand focused on pharmaceutical supply while retaining the practical capability needed to complete the transaction.

Regular export

China customs declaration and product-specific shipment constraints are reviewed as part of execution.

Destination coordination

Logistics and commercial details are aligned with the agreed destination and order conditions.

Payment route

Russia-facing business can include VTB bank transfer feasibility review when relevant.

Start with the molecule

Send a CAS list. Build the supply path.

Include product name or CAS, target purity, expected quantity and project timing.
Spreadsheets and specifications can be attached to the inquiry email.
